

CHARTING THE FUTURE

NAVALX

NavalX is in the business of innovation for the U.S. Navy and Marine Corps

American innovators have a history of creating technology for national security that also changes everyday lives. At NavalX, we're building on that legacy by making it easier — and faster — for the creators of the next great dual-use solutions to work with the Navy and Marine Corps today.

WHO WE ARE

NavalX was founded in 2019 to foster a culture of innovation across the Department of the Navy. By bringing essential resources — including Tech Bridges, SBIR, and Tech Transfer — into a unified organization, we streamline and simplify product development for both industry and the Fleet and Force.

WHAT WE DO

Today's Fleet and Force need practical solutions to their challenges. At NavalX, we bring together the people, tools, and resources to develop those solutions faster. Powered by relationships inside and outside the Department of Defense, we help innovators deliver relevant tools and solutions to Sailors and Marines — when and where they need them most.

Our success is directly aligned with the success of the entire defense innovation ecosystem. We work closely with Naval Labs, Programs, and Warfare Centers to support technological transformation in practical ways.

HOW WE DO IT

Problem Sourcing & Framing

We meet with Naval leaders and end users to understand their challenges and frame how commercial technology can help.

Identify & Develop Disruptive Tech

We scan for nontraditional solution providers. Then, we connect them with resources and Naval experts to develop their technologies.

Transition Products & Capabilities

After robust user testing, we partner with sponsors and Program Offices to support the transition of new capabilities to the warfighters.

JOIN OUR NETWORK

Working with NavalX is a foot in the door to an \$800 billion industry — and the resources that come with it. Connect with us at usnavalx.com to be the first to learn about new Naval projects that need your solutions.

NATIONAL SECURITY IS A COMMON PURPOSE

CONNECTING THROUGH TECH BRIDGES

Tech Bridges are the front door to Naval contracts for startups, scaleups, small businesses, academia, and local experts. These 18 regional teams are strategically located off-base with connections and expertise to help nontraditionalists navigate the defense innovation process.

They serve as technology scouts, local networking hubs, and connection points to Naval Warfare Centers and Labs — all to ensure the Department of the Navy has access to the best possible technology when addressing its operational challenges and strategic priorities.

THE NAVALX TOOLKIT

The mechanisms for faster, more efficient Naval innovation already exist. NavalX uses all of them — contracting methods, partnerships, research models, and more — to get the Fleet and Force what they need when they need it.

FOR AND WITH NAVAL LEADERS

At NavalX, our approach is to unite and support. We bring together the necessary stakeholders from the beginning of each effort, because we know faster solutions to your most pressing challenges means all hands on deck.
